

The Community

The “new” Sacramento Valley, while maintaining its ties to The Gold Rush, also serves as the political hub of the world's fifth largest economy. Sacramento has a population of over 400,000 in the city and nearly 1.7 million in the metropolitan area. With its Mediterranean climate, Sacramentans enjoy mild year-round temperatures, an abundance of sunshine in the summer and cool, sometimes rainy days in the winter. Sacramento offers attractions from quaint shops on downtown arterials, to upscale shopping malls and renowned cultural attractions like the many museums, historical sites, professional ballet, opera and theatre companies. Evening entertainment consists of theaters and ballet to night clubs and piano

bars. Sacramento has all the elements of a diverse and vibrant urban environment. Talk about recreation... In a city bound by two rivers, water recreation tops the list for outdoor activities: Salmon and steelhead fishing, river rafting, and boating. All can be done on the 1000 miles of waterways around Sacramento and the Delta. Sacramento also has over 540 acres of quality golfing greens and fairways and more than 2000 acres of natural and developed parklands. Sacramento is also home to successful NBA and WNBA teams and an AAA Baseball team. Lake Tahoe, Reno, the wine country of the Napa Valley, San Francisco, and the Pacific Coast are all within a two-hour drive. Great location, along with a respect for history and a handle on the future, makes Sacramento a highly desired location.

Compensation

The California Bay-Delta Authority's greatest resource is its people. To help employees experience a challenging career, while balancing their personal life, we may offer comprehensive, competitive, and flexible benefits which include:

- Competitive Pay-salary negotiable
- Alternative Work Schedules
- Training

POSITION IS OPEN UNTIL FILLED

ALIFORNIA BAY-DELTA AUTHORITY

*is seeking a
Drinking Water Quality
Program Manager*

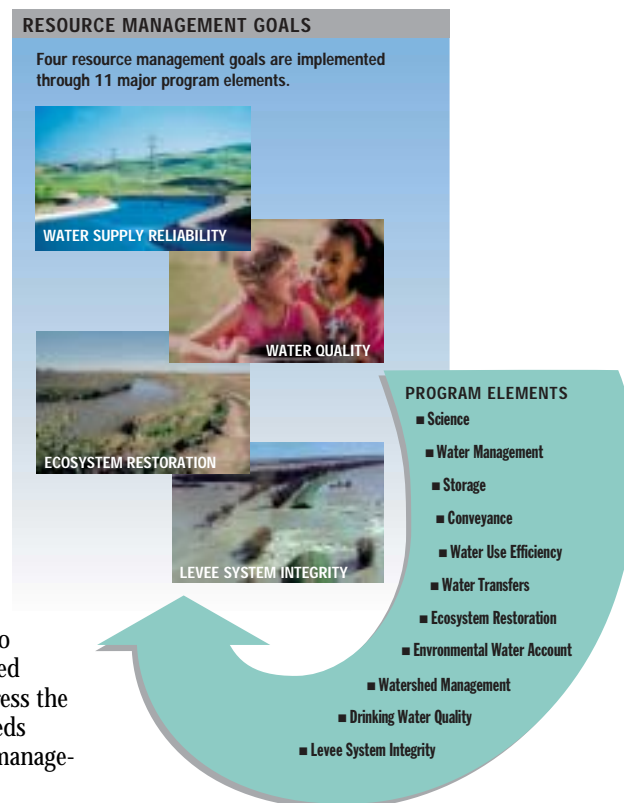

A NEW ORGANIZATION

California Bay-Delta Authority

The California Bay-Delta Authority was recently established by Senate Bill 1653. The Authority is charged with carrying out the programs, projects, and activities of the California Bay-Delta Program, a collaborative effort among 23 State and Federal agencies created to improve water supplies in California and the health of the San Francisco Bay-Sacramento-San Joaquin River Delta Watershed. The Bay-Delta Program agencies are investing in collaborative regional projects that provide local benefits while helping achieve overall Program objectives and commitments.

The Bay-Delta provides drinking water for 22 million people. It supports California's trillion-dollar economy, including its \$27 billion agricultural industry. It is the largest estuary on the west coast—home to 750 plant and animal species—and it supports 80 percent of the State's commercial salmon fisheries.

The California Bay-Delta Program is a balanced, comprehensive approach to reduce conflicts over limited water supplies and to address the State's long-term water needs through its four resource management goals.

Unprecedented Scope and Vision

The California Bay-Delta Program is the largest, most comprehensive water management program in the world. This Program includes the most complex and extensive ecosystem restoration project ever proposed. It is the most intensive water conservation effort ever tried. It is the most far-reaching effort to improve the drinking water quality of millions of Californians as well as an unprecedented commitment to watershed restoration, and it is the most significant investment in storage and conveyance in decades.

New Funding

More than a billion dollars of State and Federal funding has been made available for implementation of the California Bay-Delta Program in its first three years. Continued voter support for improving water supply reliability and ecosystem health has been demonstrated in the form of passage of Proposition 204 - The Safe, Clean, Reliable Water Supply Act of 1996, Proposition 13 - The Safe Drinking Water, Clean Water, Watershed Protection and Flood Protection Act of 2000, and most recently the passage of Proposition 50 - The Water Security, Clean Drinking Water, Coastal and Beach Protection Act of 2002, which provides hundreds of millions of dollars of new funding for balanced implementation of the California Bay-Delta Program.

Duties:

- In coordination with the implementing agencies: Department of Health Services, State Water Resources Control Board, and U.S. Environmental Protection Agency, the Drinking Water Quality Program manager is responsible for the oversight and coordination of the California Bay-Delta Authority's Drinking Water Quality Program. This is one of the key elements of the California Bay-Delta Program that has far reaching consequences for the future of water management in California.

- The Program Manager exercises broad discretion in overseeing the implementation of the Program's Drinking Water Quality Improvement Strategy. The incumbent will develop strategic planning processes and implementation policies in close collaboration with Federal and State drinking water agencies.

- Manage the policy development for drinking water quality, integrating agencies, stakeholders, environmental justice communities, tribes and the public into the identification of drinking water quality problems, and identifying, evaluating, and recommending solution options that carry out the California Bay-Delta Program policies.

- Execute collaborative policy development and technical support programs with California Bay-Delta Authority agencies and stakeholders through formation and leadership of formal and informal policy work groups and technical teams, through public outreach presentations, through ongoing personal consultation with leaders in the drinking water quality field, and through written correspondence, to ensure that a high level of support from the stakeholders is developed around the California Bay-Delta Program.

The California Bay-Delta Authority is recruiting for a Drinking Water Quality Program Manager ...

Role In the Setting of Major Department-wide Policy

The goal of the Drinking Water Quality Program is to provide safe, reliable, and affordable drinking water to the 22 million Californians who rely on the Delta for all or part of their drinking water. To reach this goal, the Drinking Water Quality Program actions combine cost-effective improvements in source water quality, advancements in treatment technology, and innovations in water management. Overall, the Drinking Water Quality Program strives to effectively integrate drinking water source protection, treatment, and distribution in order to improve public health protection. Furthermore, the Drinking Water Quality Program supports health effects research of Delta drinking water, and oversees and coordinates comprehensive monitoring and assessment of Delta drinking water quality.

The Drinking Water Quality Program Manager will work with considerable independence on the sensitive and complex task of developing, negotiating, and coordinating drinking water quality policy and in overseeing the implementation of the Drinking Water Quality Program. Implementation of these goals will have a major impact on drinking water quality throughout the State of California.

Required Knowledge, Skills, Abilities, and Personal Characteristics:

Knowledge of the following: environmental and water quality issues in California and the Bay-Delta estuary; environmental engineering principles and practices; drinking water quality and public health issues; and environmental laws and regulations.

Ability to plan, organize, and direct the work of multidisciplinary professional and administrative staff; integrate the activities of a diverse program to attain common goals; gain the confidence and support of top level administrators and advise them on a wide range of water quality and water management issues; develop cooperative working relationships with representatives of all levels of State, Federal, and local governments, and stakeholders; interpret State and Federal environmental and water quality laws; analyze complex problems and recommend effective courses of action; and prepare and review reports.

“

By taking a balanced

responsible approach

to water management

we can build a

framework that

benefits California's

environment, economy,

and urban and

agricultural water

users.

Governor Davis
